Concept

- We look for a clear favourite. Otherwise ignore
- We always start by backing the favourite but only if the Back Odds are greater than the BSP
- The first BackBet stake is equal to the GV_BackLay_BaseStake. This must be greater than or equal to \$1.00
- If the Back odds INCREASE, we place another Back Bet. The stakes for subsequent Back Bets are calculated as $GV_BackLay_BaseStake \times (BetNumber-1) \times GV_BackLay_StakeFactor$
- By following this process, we increase the weighted average Back Bet odds as well as the stake. We stop when (a) the total stake is equal to or greater than GV_BackLay_TotalStake or (b) we place a Lay Bet.
- If at anytime, the Lay Odds drop below the weighted average BackBet odds, and the corresponding arbitrage bet provides an ROI greater than GV_BackLay_MinROI, we place a lay bet, of an amount calculated in accordance with the Back-Lay arbitrage formula for stakes)
- All betting on the event then stops.
- Note that for horse and greyhound racing, we can bet live.
